

Adding Your Debit Card to Your Digital Wallet

Digital wallets such as Apple Pay, Google Pay, and Samsung Pay allow you to use your debit card on your phone while you wait for the physical card to arrive in the mail. The steps below will guide you through the process of adding your KS Bank debit card to your digital wallet.

1. Sign in to your KS Bank Mobile Banking. From the home page, select the account associated with the debit card you wish to add to your digital wallet.
2. Select “Card Management.”

3. Choose the debit card you will be adding to your digital wallet.
4. Under “Wallets and Connections” select “Add to Apple Wallet” (or Google/Samsung depending on your device).

Under this section, you can also find a “Click to Pay” option. This is a secure online check option from Mastercard that is available on participating websites. This allows for faster checkout experiences without having to manually enter your card information.

How it Works:

- At checkout with participating merchants, select “Click to Pay”
- If you haven’t already, go through the enrollment steps. Then, the system will recognize your email or device verification.
- Saved cards are displayed, and you can select the one you would like to use.
- No card details, passwords, or usernames required.
- Mastercard uses tokenization to protect your real card number.

5. On the next screen, click the “Add to Apple Wallet” button at the bottom.
6. Enter your mobile banking password for verification.
7. The system will then add the card to your digital wallet. You may be asked to accept the Terms and Conditions.

Your KS Bank debit card is now available in your digital wallet to be used for purchases through Apple Pay, Google Pay, or Samsung Pay!
